PROJECTS

• Automated Chest X-Ray Classification for Tuberculosis and Pneumonia Detection

- Developed an AI-based chest X-ray classification system to detect Normal, Pneumonia, and Tuberculosis (TB) cases.
- Used the Xception deep learning model for extracting discriminative features from chest X-ray images.
- Implemented feature-level fusion by combining Random Forest, Gaussian Naive Bayes, and K-Nearest Centroid classifiers.
- Applied image preprocessing and data augmentation techniques to improve model generalization and reduce overfitting.
- Achieved 95

Technologies: Python, TensorFlow/Keras, Xception, Random Forest, Gaussian Naive Bayes, K-Nearest Centroid, OpenCV, Scikit-learn

• Multilingual Healthcare Chatbot

- Developed an AI-powered multilingual health chatbot that analyzes symptoms and provides health-care guidance.
- Implemented voice and text input with support for English, Hindi, and Telugu languages.
- Integrated Google Translate API to translate user input and responses between multiple languages.
- Used Large Language Model (LLM) with LangChain to generate intelligent responses and maintain conversation flow.

Technologies: Python, LLM, LangChain, Google Translate API, Text-to-Speech (TTS)
